

TITLE

PROCESS AND APPARATUS FOR MAKING COMPOSITE SHEET

ABSTRACT OF THE DISCLOSURE

- 5 A process and an apparatus for high speed manufacture of a composite sheet material, which includes a cylindrical cam-driven strand-traverse guide that can loop strands around pins projecting from a pair of advancing pin conveyors which can transfer the strands to the surface of a moving sheet, are provided. When the strands are elastic, the elastic
- 10 composite sheet material made by this process and apparatus are useful in elastic components of disposable diapers, adult incontinence articles and other garments.
